

Psychiatric Pharmacists on Your Care Team

2,000

There are **over 2,000 psychiatric pharmacists** across the country working with patients living with mental illness in hospitals, clinics, and many more settings. These professionals are specially trained and ready to answer your questions!

What Psychiatric Pharmacists Do for Patients

- Provide the expertise in psychiatric medication therapy needed to complement the skills of other members of the treatment team (physician, psychiatrist, retail pharmacist).
- Assess the status of the patient's health conditions and determine whether the medications and care plan are meeting the patient's needs and goals of care.
- Evaluate the need and effectiveness of the patient's medications.
- Optimize medication therapy for health conditions not under good control.
- Work with the patient to make sure progress and recovery are being achieved based on the patient's goals.
- Collaborate with the patient's physicians, community pharmacist, and other health care providers in selecting the treatment that best meets the patient's needs and contributes to recovery.
- Advise the patient on how to best take his or her medications to maximize results while minimizing side effects.
- Support the health care team's efforts to educate the patient on other important steps to improve or maintain health.
- Refer the patient to his or her physician or other health professionals to address specific health, wellness, or social services concerns as they arise.

How Psychiatric Pharmacists Care for Patients

- Provide a recovery oriented process of patient care that ensures the goals of therapy are being met.
- Consult with the patient's health care provider(s) to develop and implement a medication plan that can achieve recovery established by the patient and health care team.
- Call on their experience to solve medication related side effects.
- Apply specialized knowledge of the scientific and clinical use of medications, including medication action, dosing, adverse effects, and drug interactions to improve quality of life while minimizing side effects to medications.
- Rely on their professional relationships with patients to maximize their medication-related experiences and assist in achieving recovery.

Finding Psychiatric Pharmacists

Contact your nearest school of pharmacy, psychiatric hospital or Veterans Affairs Medical Center for the name and location of an expert in your area. You can also search for Board Certified Psychiatric Pharmacists (BCPPs) at the Board of Pharmacy Specialties website at <https://www.bpsweb.org/find-a-board-certified-pharmacist/>

Ask your Physician for a Referral to a Psychiatric Pharmacist
